Model VXI-65CS4

FOUR SYNCHRO/RESOLVER MEASUREMENT, FOUR SYNCHRO/RESOLVER STIMULUS CHANNELS AND UP TO SIX REFERENCE SUPPLIES

VXI bus

Four (4) Instrument Synchro/Resolver Measurement Channels Four (4) Instrument Synchro/Resolver Stimulus Channels Or Eight (8) Converter Grade Synchro/Resolver Stimulus Channels Up to Six (6) Reference supplies

FEATURES

- Multiple functions on a single slot VXI card
- 0.005° Instrument Grade Measurement Accuracy
- 0.005° Instrument Grade Stimulus Accuracy
- 0.015° Converter Grade Stimulus Accuracy
- 47 Hz to 4,000 Hz (see part number).
 For 47Hz to 10kHz or 20kHz contact factory
- Programmable output voltages
- 2.2 VA Outputs
- Up to Six built-in 2.2 VA Reference Generators
- Simultaneous and independent Measurement and Simulation
- Single-Speed or Multi-Speed Programmable for Measurement and Simulation
- Programmable Multi-Speed Ratios (2 to 255)
- Galvanic isolation (500 V)
- Auto-calibration
- Self-Test capability
- Dynamic address configuration
- VXIbus data rate of 2 megabytes/sec
- Data is processed within 100 μs
- No adjustments or trimming required

DESCRIPTION

This C size module is a Instrument/Converter Grade, intelligent DSP design, that incorporates up to four Synchro/Resolver Measurement channels, and up to four Instrument Grade Synchro/Resolver Simulation channels or up to eight Converter Grade Synchro/Resolver (Simulation) channels that can be used independently and/or simultaneously. If six Reference supplies are required, the six References will replace the Stimulus channels. All measurement and simulation channels are user programmable for either Synchro or Resolver format and may be formatted for either single-speed or multi-speed applications. Programmable speed ratios (2:1 to 255:1) offer additional flexibility for those applications requiring two-speed capability. Each Simulation channel can be programmed for either continuous rotation or programmable Start and Stop angles. This instrument contains all the necessary functions to fully evaluate, calibrate and simulate Synchro/Resolver components and systems. With its built-in reference generators, superb accuracy, resolution and high power output capability this module can form the basis of a fully integrated system for testing any Synchro/Resolver signal. This design also incorporates our new internal wrap-around Self Test capability that does not require any external hardware.

This module consists of a motherboard and two daughter-boards that enable the user to specify a variety of functions within this single slot design. (See part number for details)

Contact our Applications center for immediate help for your requirements. Phone (631 567-1100, ext. 165, or 176, or 173) or contact us via e-mail [sales@naii.com]

CALIBRATION

This module is self calibrating. Verification, approximately every two years, is suggested.

SPECIFICATIONS: INSTRUMENT MEASUREMENT, INPUT

Number of Channels: Four (see part number)

Input Mode: Synchro/Resolver, programmable

Angular Range: 0 – 359.9999 Resolution: 0.0002°

Accuracy (Synchro/Resolver): ±.005° over frequency (See part number)

Input Voltage (Resolver): 1.0-90 VL-L Auto-ranging Input Voltage (Synchro): 11.8-90 VL-L Auto-ranging

Input Impedance: $>11.8 \text{ VL-L } 60 \text{k}\Omega$; $<11.8 \text{ VL-L } 13.3 \text{ k}\Omega$

Tracking Rate: 4.68 rps

For two-speed applications, speed is referenced to the fine channel.

Angle Rate, Digital: 16-bit resolution; Linearity: 0.1%. Scalable to 0.1°/sec resolution.

Angle Rate, DC Programmable from ± 100 to $\pm 1000^{\circ}/\text{sec} = \pm 10$ VDC (referred to Coarse input)

4 mA Short Circuit Protected

Speed Ratio: Requires two channels, then the pair is programmable from 2:1 to 255:1 in

increments of 1.

Input Reference, Frequency: See part number

Reference, Voltage: 2 Vrms to 115 Vrms, Auto-ranging

Reference, Input Z: $100 \text{ k}\Omega$

Auto phase Correction: Up to 80° between Reference and Signal

Isolation: Each Signal & Reference Input is galvanically isolated with 500 V peak

breakdown over the specified frequency range.

SPECIFICATIONS: INSTRUMENT STIMULUS, OUTPUT

Number of Channels: Four (see part number)

Output Mode: Synchro/Resolver, programmable/channel

Resolution: 0.001°

Accuracy: (Resolver): $\pm .005^{\circ}$ 360Hz to 800Hz

 $\pm .010^{\circ}$ >800Hz to 2,000Hz

(Synchro): ±.012° 47Hz to 100Hz

±.005° >100Hz to 800Hz

Output Drive: 2.2 VA, ≥11.8 VL-L; 200 mA rms, <11.8 VL-L

Output voltage: 1.0 to 90 VL-L, programmable Output Protection: Over-current and over-temperature

Output VL-L Resolution: 0.01V. Output voltage varies directly with Reference voltage.

Output VL-L, Accuracy: 2% (relative to the reference voltage)

Input Reference, Frequency: See part number

Reference, Voltage: 2 Vrms to 115 Vrms, programmable Phase Shift: 2° max. Reference input to Signal output.

Speed Ratio: Requires two channels, then the pair is programmable from 2:1 to 255:1 in

increments of 1.

Rotation: Continuous rotation or programmable Start and Stop angles. 0 to ±13.6 rps with

a resolution of 0.15°/sec. Step size is 16 bits (0.0055)° up to 1.5 rps, then linearly

decreases to 12 bits (0.088°) at 13.6 rps.

Velocity Output, DC ± 1000 °/sec = ± 10 VDC (referred to Coarse output)

±100 °/sec = ±10 VDC 4 mA Short Circuit Protected

Accuracy Velocity Output ±0.25% FS (Full Scale) Gain ±10mV offset

 www.naii.com / e-mail:sales@naii.com
 Cage Code:OVGU1
 Page 2 of 22

Isolation: Each Signal & Reference Input is galvanically isolated with 500 V peak

breakdown over the specified frequency range.

SPECIFICATIONS: CONVERTER GRADE STIMULUS, OUTPUT

Number of Channels: Eight (see part number)

Output Mode: Synchro/Resolver, programmable/channel

Resolution: 0.1

Accuracy (Synchro/Resolver): $\pm 0.02^{\circ}$ over frequency of 340 Hz to 1,000Hz;

Output Drive: 1.25 VA at 70°

Output Protection: Over-current and over-temperature

Output VL-L 2.0 to 26 VL-L, programmable; resolution 0.01V

Output voltage varies directly with Reference voltage.

Output VL-L, Accuracy: 2% (relative to the reference voltage)

Reference, Frequency: 360 Hz to 1,000 Hz

Reference, Voltage: 26 Vrms, 90 Vrms, or 115 Vrms, programmable

Phase Shift range: ±179.9° Reference input to Signal output.

Phase shift resolution: 0.1°

Phase shift accuracy: Offset 0.5°max. then linearity is 0.1° over range.

Rotation: Continuous rotation or programmable Start and Stop angles. 0 to ±13.6 rps with

a resolution of 0.15°/sec. Step size is 16 bits (0.0055)° up to 1.5 rps, then linearly

increases to 12 bits (0.088°) at 13.6 rps.

Isolation: Each Signal & Reference Input is galvanically isolated with 500 V peak

breakdown over the specified frequency range.

Specifications: Reference Generator

Number of Channels: Six (see part number)

Voltage Output: 2 Vrms to 115 Vrms, Programmable

Resolution: 0.1 V Accuracy, voltage: ±3%

Harmonic Content: 1.0% maximum

Output Drive Capability: 2.2 VA

Output Protection: Over-current and over-temperature

Frequency: 47 Hz to 10 kHz Programmable with 0.1 Hz steps

Accuracy, frequency: 0.1%

SPECIFICATIONS: APPLICABLE TO THE OVERALL MODULE:

VXIBus Data Rate: 2 megabytes/second

Trigger: Rotation may be initiated by either an external (Front Panel) or via the trigger

bus. External trigger is terminated with a 499 Ω resistor and is connected to a differtential Line Receiver (SN75115N). Trigger input to be 8 microseconds min.

width.

Data states: Track or freeze for Measurement channels only

Temperature, Operating: 0°C to +50°C Temp. Non-Operating: -40°C to +71°C

Relative Humidity: to 95% RH non-condensing Designed to meet 15G, 11 ms

Vibration: Designed to meet MIL-PRF-28800F for class 3 equipment.

Altitude, Operating: 10,000 feet Altitude, Non-Operating: 40,000 feet

Power Requirements: +5 VDC 8A at no load; 14A with all channels fully. loaded

Size: "C" size (13.386" x 9.187"), 1.2" pitch. (349mm x 234 mm),30 mm pitch

Weight: 4.3 lb

Calibration Intervals: Verification is suggested every two years

CARD ADDRESS

Address Dip Switch 1 can be configured for logical addresses 1 to 255, where OFF=1 and ON=0. LSB is position 1. Card SW1 is default configured for logical address 128, to address the first set of 8 channels. Address Dip Switch 2 is not used.

<u>Decimal</u>	Logical Address 128 (Default)	Logical Address 33 (Example)
1 (LSB)	SW1, position 1=0 (ON)	SW1, position 1=1 (OFF)
2	SW1, position 2=0 (ON)	SW1, position 2=0 (ON)
4	SW1, position 3=0 (ON)	SW1, position 3=0 (ON)
8	SW1, position 4=0 (ON)	SW1, position 4=0 (ON)
16	SW1, position 5=0 (ON)	SW1, position 5=0 (ON)
32	SW1, position 6=0 (ON)	SW1, position 6=1 (OFF)
64	SW1, position 7=0 (ON)	SW1, position 7=0 (ON)
128 (MSB)	SW1, position 8=1 (OFF)	SW1, position 8=0 (ON)

65CS1 Bottom View

FRONT PANEL STATUS INDICATORS

Status Indicators	Function
READY	Indicates that unit is ready to accept commands
ACCESS	Illuminates when VXI bus controller sends or reads a message or status.
FAILED	Lights on power-up and goes out after unit has passes system self-test. Stays lit if device has
	failed Self-Test or Calibration. Indicator will also light in response to Controller SYSFAIL output
TEST	Illuminates while Internal Self-Test is running. Flashes during Calibration cycle.

PROGRAMMING

One VXI 65CS4 supports up to 4 channels of each measurement and stimulus. Use SW1 to configure the address for those channels. Use Native Syntax to address any channel of that associated logical address.

Self-test can be performed at any time without effecting any set parameters. Self-test requires approximately 45 seconds to complete.

TO POWER ON CARD AND ENABLE OPERATION, user must send command *IDN?

Perform self-test (*TST?<CR><LF>) before programming. Testing is complete in approximately 45 seconds.

The following sections define Native programming format with supporting examples

Formal Syntax Notation

< > field boundaries of inseparable and mandatory items

field boundaries of optional items

20 S. S. M. 2 (10 I _ I I I I Z O I I) Of the Common of t	DS <channel>ROT_INIT<cr><lf></lf></cr></channel>	Command initiates rotation of channel output.

Rotation Rate	
DS <channel><<i>b</i>> ROT_RATE<<i>b</i>><value><<i>cr</i>><<i>lf></i></value></channel>	Set channel Rotation Rate in revolutions per second (RPS). Range: 0.15 to 13.60
DS <channel>REF_RATE?<cr><lf></lf></cr></channel>	Query returns programmed channel Rotation Rate.
Rotation Stop Angle	
DS <channel><<i>b</i>> ROT_STOP_ANGLE<<i>b</i>><value><<i>cr</i>><<i>lf</i>></value></channel>	Sets channel output angle (in degrees): Range: -359.9999 < value < 359.9999
DS <channel> ROT_STOP_ANGLE?<cr>><!--f--></cr></channel>	Queries returns Channel Stop Angle in uni-polar mode: Range: 0.0000 < value < 359.9999
Rotation Mode	
DS <channel> REF_MODE< CONT STEP ><cr>></cr></channel>	Sets Channel Reference Source; CONT=Continuous or STEP=Step
DS <channel>REF_SOURCE?<cr><lf></lf></cr></channel>	Query returns Channel Rotation Mode ('CONT' or 'STEP')
Trigger Source	
DS <channel>TRIG_SOURCE <bus ext="" int="" ttl="" =""><cr><fb></fb></cr></bus></channel>	Sets Channel Trigger Source; BUS=Bus, INT=Internal, EXT=External, or TTL=TTL Level
DS <channel> TRIG_SOURCE?<cr>><fr></fr></cr></channel>	Query returns Channel Trigger Source ('BUS','INT','EXT',or TTL')
Trigger Slope	
DS <channel>TRIG_SLOPE < NEG POS ><cr><tf></tf></cr></channel>	Sets Channel Trigger Sense for Positive or Negative going level; NEG=Negative, POS=Position
DS <channel>TRIG_SLOPE?<cr><lf></lf></cr></channel>	Query returns Channel Trigger Sense ('NEG', or 'POS')
Phase Shift	
DS <channel>PHASE<value><cr><lf></lf></cr></value></channel>	Sets Channel Phase (degrees); Range ±180.0
DS <channel>PHASE?<cr><lf></lf></cr></channel>	Query returns Channel Phase (degrees); Range: ±180

API COMMANDS

Angle	
SD <channel> ANGLE?<value><cr><lf></lf></cr></value></channel>	Query returns API angle (in degrees): Range: 0.0000 < value < 359.9999
DC Scale	
SD <channel><<i>b</i>> DC_SCALE<<i>b</i>><value><<i>cr</i>><<i>lf</i>></value></channel>	Sets Channel DC output Scale; Full scale = 10Volts Range: 100 <= value <= 1000. (e.g. 100 = 10 degrees / sec / V)
SD <channel>DC_SCALE?<cr><lf></lf></cr></channel>	Query returns Channel DC Scale value
Bandwidth	
SD <channel> BANDWIDTH< HIGH LOW ><cr><tf></tf></cr></channel>	Sets Channel for either High or Low Bandwidth (BW); HIGH=100 Hz BW or LOW= 10 Hz BW Use LOW for carrier (reference) freq <300Hz.
SD <channel>BANDWIDTH?<cr><lf></lf></cr></channel>	Query returns Channel Bandwidth ('HIGH' or 'LOW')

Maximum Angle Settle Time	
SD <channel>MAXT<value><cr><lf></lf></cr></value></channel>	Maximum wait time for settled API reading. Sets channel Max ? (in ?): Range: 0 < value < 20
SD <channel>MAXT?<cr><lf></lf></cr></channel>	Queries returns Channel Max ?.
Signal Mode	
SD <channel>MODERSL<cr>>If></cr></channel>	Sets channel signal format (mode) to RESOLVER
SD <channel>MODESYN<cr><lf></lf></cr></channel>	Sets channel signal format (mode) to SYNCHRO
SD <channel>MODE?<cr><lf></lf></cr></channel>	Query returns current Signal Mode ('RSL' or 'SYN')
Ratio	
SD <channel>RATIO<value><cr><lf></lf></cr></value></channel>	Sets channel 2-Speed/Multi-speed ratio; Range = 1 to 255.
SD <channel>RATIO?<cr><lf></lf></cr></channel>	Query returns channel 2-Speed/Multi-speed ratio setting.
Reference Mode	
SD <channel> REF_SOURCE< INT EXT ><cr>><lf></lf></cr></channel>	Sets Channel Reference Source; INT=Internal or EXT=External Internal Source Channels 1 & 2 is Reference 1. Internal Source Channels 3 & 4 is Reference 2.
SD <channel>REF_SOURCE?<cr><lf></lf></cr></channel>	Query returns Channel Reference Mode ('INT' or 'EXT')
Relay Function	
SD <channel> STATE< OPEN CLOSE ><cr></cr></channel>	Sets I/O isolation relay state; "OPEN" or "CLOSE".
SD <channel>STATE?<cr><lf></lf></cr></channel>	Query returns I/O relay status "OPENED" or "CLOSED".
Measurement Mode	
SD <channel> UPDATE< LATCH TRACK ><cr>><lf></lf></cr></channel>	Sets API channel Update Mode to "LATCH" or "TRACK".
SD <channel>UPDATE?<cr><lf></lf></cr></channel>	Query returns channel Update mode "LATCHED" or "TRACKING".
Velocity	
SD <channel>VEL?<value><cr><lf></lf></cr></value></channel>	Query returns channel velocity Range: -32767 < value < 32767. Typically ±10,000dps.

REFERENCE COMMANDS

Reference Generator Frequency	
REF_GEN <channel> FREQ<value><cr><tf></tf></cr></value></channel>	Sets internal Reference Generator frequency in Hz. Range = 47.00 to 10000.00z.
REF_GEN <channel>FREQ?<cr><lf></lf></cr></channel>	Query returns Reference Generator frequency setting.
Relay Function	
REF_GEN <channel> STATE< OPEN CLOSE ><cr></cr></channel>	Sets I/O isolation relay state; "OPEN" or "CLOSE".
REF_GEN <channel>STATE?<cr><lf></lf></cr></channel>	Query returns I/O relay status "OPENED" or "CLOSED".
Reference Generator Voltage	
REF_GEN <channel> VOLT<value><cr><tf></tf></cr></value></channel>	Sets internal Reference Generator voltage; Range = 2 to 115 volts.
REF_GEN <channel>VOLT?<cr><lf></lf></cr></channel>	Returns internal Reference Generator voltage setting.

UTILITY FUNCTIONS

Self-Test	
*TST? <cr><lf></lf></cr>	Initiates self-test. Query returns 0 <cr>or SELF TEST FAILED<cr></cr>if test failed. Self-test requires approximately 45 seconds to complete.</cr>
Identification	
*IDN?< <i>cr</i> >< <i>lf</i> >	Returns: "north atlantic, <part number="">,<serial #="">, <firmware revision="">"</firmware></serial></part>
	THIS COMMAND IS REQUIRED TO POWER ON CARD AND ENABLE OPERATION.
Error Reporting	
*ERR?< <i>cr><lf></lf></i>	Query returns up to 10 most recent error messages or "No error." To clear error queue, read until "No error" is received.

eset	
*RST <cr><lf></lf></cr>	Sets unit to power-up default state:
	SD MAXT = 0 SD BANDWIDTH = HIGH SD DC SCALE = 1000 SD RATIO = 1 SD REF SOURCE = EXT SD STATE = OPEN SD UPDATE = TRACK
	REF FREQ = 400 REF VOLT = 115 REF STATE = OPEN
	DS ANGLE = 0.0000 DS DC SCALE = 1000 DS MODE = SYN DS RATIO = 1 DS REF SOURCE = EXT DS REF VOLT = 115 DS ROT RATE = 0 DS STOP ANGLE = 0.0000 DS ROT MODE = CONT DS STATE = OPEN
	DS TRIG SLOPE = POS DS TRIG SOURCE = INT

DS VLL VOLT = 90

Instrument Setup Queries.

Any Model 65CS1 setup state or value may be queried by sending the command mnemonic with a question mark (?) appended and reading the response. See *Command Definition Section* for detailed command syntax. Valid instrument queries are summarized as follows:

ANGLE? Generator output angle or API reading

DC SCALE? Return DC Scale

MODE? Synchro (SYN) or Resolver (RSL) mode VLL_VOLT? Line-to-Line input/output voltage value

RATIO? Speed Ratio value

REF_VOLT_IN? Input Reference Voltage Setting

ROT_DONE? Step Rotation Status

REF_RATE? Rotation Rate ROT_STOP_ANGLE? Stop Angle

REF_SOURCE? Reference Internal (INT) or External (EXT)

TRIG_SOURCE? Trigger Source
TRIG_SLOPE? Trigger Slope

BANDWIDTH? Returns Bandwidth

MAXT? API stable measurement timeout value

STATE? Relay State OPENED or CLOSED

UPDATE? Generator velocity value

VEL? Velocity

*TST? Self test status. Self-test requires approximately 45 seconds to complete.

*IDN? Instrument Identification string.

REQUIRED TO POWER ON CARD AND ENABLE FOR OPERATION

*ERR? Returns 10 recent error messages

CALIBRATION VERIFICATION TEST SET-UP

This unit does not require field calibration. Use the following setup to verify performance that may be performed approximately every two years.

The below tests will not necessarily assure conformance to all specification limits but will verify that all features are functional. Each test is presented in a step-by-step format and references a test equipment setup diagram. The test equipment setup figure illustrates the complement of test equipment necessary to perform the test for a single or pair of channels and shows all required interconnections between the test equipment and the device under test (DUT) using the standard J1 configuration #1. As applicable, all tests can be repeated as required to test the remaining channels (see part number).

Internal Reference Checkout Procedure

- a. Set up equipment as shown in Figure 1.
- b. Program DUT using the following commands strings:

REF_GEN1 FREQ 400.00 REF_GEN1 VOLT 26.0 REF_GEN1 STATE CLOSE

- d. Verify that the Frequency reading on the DMM is programmed value $\pm 2\%$..
- Verify that the Fundamental Voltage reading on the DAV (read REF channel) is programmed value ±0.1%.
- e. Verify that the Distortion Measurement on the DAV (read REF channel) is less than 1.0%.
- f. Program DUT to 115V with the following string and repeat steps (c) through (e) above.

REF_GEN1 VOLT 115.0

g. Program DUT to 6V with the following string and repeat steps (c) through (e) above.

REF_GEN1 VOLT 6.0

h. Program DUT to 47Hz with the following string and repeat steps (c) through (g) above (for 5395-F2 only).

REF_GEN1 FREQ 47.00

i. Program DUT to 2000Hz with the following string and repeat steps (c) through (g) above.

REF GEN1 FREQ 2000.00

Single-Speed Generation (Simulator) Internal Reference Checkout Procedure

- a. Set up equipment as shown in Figure 2.
- b. Program DUT using the following command strings:

DS1 REF_SOURCE INT REF_GEN1 FREQ 47.00 REF_GEN1 VOLT 115.0 DS1 VLL VOLT 90.0

DS1 MODE SYN
DS2 RATIO 1
DS1 CLOSED
REF GEN1 STATE CLOSE

c. For each angle listed below, make connections to DAV SIG HI and SIG LO as shown. Program each specified angle using the ANGLE 3 <value> command.

<u>Angle</u>	Connections .
0.000	S3 to HI, S1 to LO
60.00	S3 to HI, S2 to LO
120.0	S1 to HI, S2 to LO
180.0	S1 to HI, S3 to LO
240.0	S3 to HI, S2 to LO
300.0	S1 to HI, S2 to LO

 Verify that each in-phase voltage reading is within the limits specified:

limit: 0±23.56mV in-phase

e. Program DUT to 400Hz using the following command string:

REF_GEN1 FREQ 400.00

- f. Repeat step (c) above.
- g. Verify that each in-phase voltage reading is within the limits specified:

limit: 0±7.853mV in-phase

h. Program DUT to Resolver Mode, 26V L-L, 26V reference using the following command string:

DS1 MODE RSL REF_GEN1 VOLT 26.0 DS1 VLL VOLT 26.0

i. For each angle listed below, make connections to DAV SIG HI and SIG LO as shown. Program

each specified angle using the ANGLE<value> command.

<u>Angle</u>	Connections .
0.000	S1 to S4, S3 to HI, S1 to LO
45.00	S1 to S4, S3 to HI, S2 to LO
90.00	S1 to S2, S2 to HI, S4 to LO
135.0	S1 to S2, S3 to HI, S4 to LO
180.0	S1 to S4, S3 to HI, S1 to LO
225.0	S1 to S4, S3 to HI, S2 to LO
270.0	S1 to S2, S2 to HI, S4 to LO
315.0	S1 to S2, S3 to HI, S4 to LO

j. Verify that each in-phase voltage reading is within the limits specified:

Angles 0, 90, 180, 270 limit: 0±2.268mV in-phase

Angles 45, 135, 225, 315 limit: 0±3.207mV in-phase

k. Program DUT to 11.8V L-L using the following command string:

DS1 VLL_VOLT 11.8

- I. Repeat step (i) above.
- m. Verify that each in-phase voltage reading is within the limits specified:

Angles 0, 90, 180, 270 limit: 0±1.029mV in-phase

Angles 45, 135, 225, 315 limit: 0±1.455mV in-phase

n. Program DUT to 2000Hz using the following command string:

REF GEN1 FREQ 2000.00

- o. Repeat step (i) above.
- p. Verify that each in-phase voltage reading is within the limits specified:

Angles 0, 90, 180, 270

limit: 0±2.058mV in-phase

Angles 45, 135, 225, 315 limit: 0±2.910mV in-phase

q. Program DUT to 1.0V L-L and 6V Reference using the following command string:

DS1 VLL_VOLT 1.0 REF GEN1 VOLT 6.0

- r. Repeat step (i) above.
- s. Verify that each in-phase voltage reading is within the limits specified:

Angles 0, 90, 180, 270 limit: 0±0.1745mV in-phase

Angles 45, 135, 225, 315 limit: 0±0.2468mV in-phase

Single-Speed Generation (Simulator) External Reference Checkout Procedure

- a. Set up equipment as shown in Figure 3.
- b. Program DUT using the following command strings:

DS1 REF_SOURCE EXT DS1 REF_VOLT_IN 115.0 DS1 VLL_VOLT 90.0 DS1 MODE SYN DS2 RATIO 1 DS1 STATE CLOSED

- Turn on Model 5300 Reference Source and set reference output to Internal Reference, 47 Hz, 115V.
- d. For each angle listed below, make connections to DAV SIG HI and SIG LO as shown. Program each specified angle using the DS1 ANGLE<value> command.

 Angle
 Connections

 0.000
 S3 to HI, S1 to LO

 60.00
 S3 to HI, S2 to LO

 120.0
 S1 to HI, S2 to LO

 180.0
 S1 to HI, S3 to LO

 240.0
 S3 to HI, S2 to LO

 300.0
 S1 to HI, S2 to LO

d. Verify that each in-phase voltage reading is within the limits specified:

limit: 0±23.56mV in-phase

 e. Program DUT to Resolver mode, 400Hz, 26V L-L, 26V Reference using the following command string:

> DS1 MODE RSL DS1 VLL VOLT 26.0

- f. Set Model 5300 Reference Source to 400Hz.
- g. For each angle listed below, make connections to DAV SIG HI and SIG LO as shown. Program each specified angle using the **DS1 ANGLE** <value> command.

<u>Angle</u>	Connections .
0.000	S1 to S4, S3 to HI, S1 to LO
45.00	S1 to S4, S3 to HI, S2 to LO
90.00	S1 to S2, S2 to HI, S4 to LO
135.0	S1 to S2, S3 to HI, S4 to LO
180.0	S1 to S4, S3 to HI, S1 to LO
225.0	S1 to S4, S3 to HI, S2 to LO
270.0	S1 to S2, S2 to HI, S4 to LO
315.0	S1 to S2, S3 to HI, S4 to LO

h. Verify that each in-phase voltage reading is within the limits specified:

6/20/5 Cage Code:OVGU1 65CS4_A001_Rev_5.2 Page 13 of 22 Angles 0, 90, 180, 270 limit: 0±2.268mV in-phase Angles 45, 135, 225, 315 limit: 0±3.207mV in-phase

i. Program DUT to 11.8V L-L, 2000Hz using the following command string:

DS1 VLL VOLT 11.8

- j. Set Model 5300 Reference Source to 2000Hz.
- k. Repeat step (g) above.
- I. Verify that each in-phase voltage reading is within the limits specified:

Angles 0, 90, 180, 270 limit: 0±2.058mV in-phase Angles 45, 135, 225, 315 limit: 0±2.910mV in-phase

Two-Speed Generation (Simulator) Checkout Procedure

- Set up equipment as shown in Figure 4.
- b. Program DUT using the following command strings:

DS1 REF_SOURCE INT REF_GEN1 FREQ 400.00 REF_GEN1 VOLT 26.0 DS1 VLL_VOLT 11.8 DS2 VLL_VOLT 11.8 DS1 MODE RSL DS2 MODE RSL DS1 STATE CLOSED DS2 STATE CLOSED REF GEN1 STATE CLOSE

c. Set DUT speed ratio to 2 with the following program string:

DS2 RATIO 2

 For each angle listed below, read the 1X API and the NX API. Program each specified angle using the DS1 ANGLE <value> command.

> Nominal Angle 0.000 45.00 90.00 135.0 180.0 225.0

270.0 315.0

e. Verify that each API reading is within the limits specified:

1X API

limit: ±45.0° from nominal

NX API

limit: 0±0.01° from nominal

f. Set DUT speed ratio to 15 with the following program string:

DS2 RATIO 15

- g. Repeat step (d) above.
- Verify that each API reading is within the limits specified:

1X API

limit: ±6.0° from nominal

NX API

limit: 0±0.075° from nominal

j. Set DUT speed ratio to 50 with the following program string:

DS2 RATIO 50

- k. Repeat step (d) above.
- I. Verify that each API reading is within the limits specified:

1X API

limit: ±1.8° from nominal

NX API

limit: 0±0.250° from nominal

Generation (Simulator) Angle Rate Checkout

- Set up equipment as shown in Figure 5.
- b. Program DUT using the following command strings:

DS1 REF_SOURCE INT REF_GEN1 FREQ 400.00 REF_GEN1 VOLT 26.0 DS1 VLL_VOLT 11.8 DS1 MODE RSL DS2 RATIO 1 DS1 ROT_RATE 360 DS1 ROT_MODE CONT DS1 STATE CLOSED REF_GEN1 STATE CLOSE DS1 ROT INIT

- c. Set oscilloscope to 100mS per division.
- d. Synchronize oscilloscope to display a sinusoidal envelope. Then envelope should go from zero, to full scale, and back to zero in 0.50 seconds. The display will show exactly 2 envelope waveforms.

Single-Speed Measurement (API) Internal Reference Checkout Procedure

- Set up equipment as shown in Figure 6.
- b. Program DUT using the following command strings:

SD1 REF_SOURCE INT REF_GEN1 FREQ 400.00 REF_GEN1 VOLT 115.0 SD1 MODE SYN SD1 STATE CLOSED REF_GEN1 STATE CLOSE

- Setup Model 5300 Simulator to External Reference, 400Hz, 90V L-L, Synchro mode. Press Model 5300 CAL button.
- d. For each angle listed below, set the Model 5300 Simulator Output Angle, and read the DUT under test using the SD1 ANGLE? command.

Nominal Angle

0.000

45.00

90.00

135.0

180.0

225.0

270.0

315.0

 Verify that all angle readings are within the following limit:

Limit: 0.0050°

- f. Set Model 5300 to 26V Reference, 11.8V L-L, Resolver mode. Press Model 5300 CAL button.
- g. Set DUT to 26V Reference, 11.8V L-L , Resolver mode with the following program string:

REF_GEN1 VOLT 26.0 SD1 MODE RSL

- h. Repeat steps (d) through (e) above.
- Set Model 5300 to 6V Reference, 1.0V L-L, 2000Hz. Press Model 5300 CAL button.
- j. Set DUT to 6V Reference, 1.0V L-L, 2000Hz with the following program string:

REF_GEN1 VOLT 6.0 REF GEN1 FREQ 2000.00

o. Repeat steps (d) through (e) above but use the following limits.

Limit: ±0.0240°

Single-Speed Measurement (API) External Reference Checkout Procedure

- a. Set up equipment as shown in Figure 7.
- Program DUT using the following command strings (Note, 47Hz test for 5395-F2 only):

SD1 REF_SOURCE EXT SD1 MODE SYN SD2 RATIO 1 SD1 STATE CLOSED

- c. Setup Model 5300 Simulator to Internal Reference, 47Hz, 90V L-L, Synchro mode. Press Model 5300 CAL button.
- For each angle listed below, set the Model 5300 Simulator Output Angle, and read the DUT under test using the SD1 ANGLE? command

Nominal Angle

0.000

45.00

90.00

135.0

180.0

225.0

270.0

315.0

e. Verify that all angle readings are within the following limit:

Limit: 0.0120°

- f. Set Model 5300 to 26V L-L, Resolver mode. Press Model 5300 CAL button.
- g. Set DUT to 400Hz, 26V Reference, 26V L-L, Resolver mode with the following program string:

REF_GEN1 STATE OPEN SD1 MODE RSL

Repeat steps (d) through (e) above but use the following limits:

Limit: ±0.005°

- Set Model 5300 to 11.8V L-L, 2000Hz. Press Model 5300 CAL button.
- j. Repeat steps (d) through (e).

Two-Speed Measurement (API) Checkout Procedure

- a. Set up equipment as shown in Figure 8.
- Program DUT using the following command strings:

SD1 REF_SOURCE EXT REF_GEN1 STATE OPEN SD1 MODE RSL SD2 MODE RSL SD1 STATE CLOSED REF_GEN1 STATE CLOSED

- Setup Model 5300 Simulator #1 (connected to 1X outputs) to Internal Reference, 115V Reference, 400Hz, 90V L-L, Resolver. Press Model 5300 CAL button.
- d. Setup Model 5300 Simulator #2 (connected to NX outputs) to External Reference, 90V L-L,
 Resolver. Press Model 5300 CAL button.

e. Program DUT to speed ratio of 2 using the following command string.

SD2 RATIO 2

f. For each angle listed below, set the Model 5300 Simulator #1 and Model 5300 Simulator #2 Output Angle, and read the DUT under test using the SD1 ANGLE? command.

> Nominal Angle 0.000 45.00 90.00 135.0 180.0 225.0 270.0 315.0

- g. Verify that each reading is within the following limit: ±0.003°
- h. Program DUT to speed ratio of 15 using the following command string.

SD1 RATIO 15

- i. Repeat step (f) and (g) above.
- h. Program DUT to speed ratio of 16 using the following command string.

SD1 RATIO 16

- i. Repeat step (f) and (g) above.
- h. Program DUT to speed ratio of 50 using the following command string.

SD1 RATIO 50

i. Repeat step (f) and (g) above.

Generator (Simulator) DC Rate Output Checkout Procedure

- a. Set up equipment as shown in Figure 9.
- b. Program DUT using the following command strings:

DS1 REF_SOURCE INT
REF_GEN1 FREQ 400.00
REF_GEN1 VOLT 26.0
DS1 VLL_VOLT 11.8
DS1 MODE RSL
DS2 RATIO 1
DS1 ROT_RATE 500
DS1 ROT_MODE CONT
DS1 DC_SCALE 1000
SD1 STATE CLOSED
DS1 ROT_INIT

- c. Setup DMM to read DC volts.
- d. DMM should read nominal voltage of 5.00V DC.

CONNECTOR CONFIGURATION

Connector Pin-out is dependant upon ordered card configuration (see part number). Daughter Board #1 populates connector J1. Daughter Board #2 populates connector J2. Instrument Grade connector has 37 pins. Conventional Grade connector has 78 pins. Mating connectors are not supplied. Pin-out is sorted by Function

Instrument Grade Connector **DC37P**. Mate DC37S or equivalent

REVISION HISTORY

Revision	Description of Change	Engineer	Date
2	Initial Release	FH	3/22/05
3	PN updated	GS	3/24/5
4	PN updated with Frequency Ranges	GS	3/31/5
4.1	Adds MODEL VXI- to Title. For consistency, used Converter Grade terminology through out.	GS	4/7/5
5.0	Resolver Measurement Input Voltage range is 1.0-90 VL-L (not 2-90)	GS	4/19/5
5.1	Maps J1 and J2 to Instrument and/or Conventional Grade Connector pin-out.	GS	5/12/5
5.2	Updates number of references	GS	6/20/5
